ABOUT US

Spacecannon is an historical brand and has played a key role in the realisation of a number of renowned and unique international architectural lighting projects. Since 2015 Spacecannon has been part of the Nordgas group that works primarily in the electronic market and has been developing data transmission systems for the last 20 years; Nordgas is thus able to bring to the lighting market a wealth of experience and technology, increasing the value of Spacecannon in the process.

The mission is to «melt Nordgas technology with the lighting experience of Spacecannon», offering our clients the best technology available today and creating intelligent lighting systems that are required by the market. With this idea, Spacecannon have extended their product range beyond the architectural lighting portfolio and can now offer high-quality solutions for sport, industrial, and street lighting.

All products are designed and manufactured in Italy. Today the company comprises an R&D department with a staff of 20 specialists plus around 50 employees in the production department, and is able to develop “custom made” solutions on demand to meet clients’ specific needs. The combination of Spacecannon know-how and Nordgas technology is capable of satisfying the most demanding and stringent specifications. Design and technological solutions are our DNA – expressed by our team through our wide product portfolio.

SINCE 2000

Nordgas is a Company that since 2000 designs and manufactures electronic products for the HVAC market

SINCE 2015

Since 2015 Nordgas has joined the LIGHTING division to the HVAC sector that deals with design and production of lighting systems for large areas. These products are marketed under the brand.

Nova OUTOOR 12 W/m or 25 W/m

IP67  CE

LED COLOR

White (cool, warm, neutral) / Red / Green / Blue
+ extra color Orange / Lime / Royal Blue

POWER
12 W/m or
25 W/m

INSTALLATION

The high IP rating allows the use also near swimming pools and fountains.

NOVA Outdoor is a thin LED bar for architectural lighting. The housing in anodized aluminum alloy is small with an elegant silver finish. It works at 24V DC and it is available in many color temperatures, from 2500K up to 6000K with minimum CRI 80. NOVA allows to choose from many colors besides white: red, orange, green blue, lime and royal blue. The high IP rating allows the use also near swimming pools and fountains.

The high density pitch grants a nice homogeneous effect hiding completely the hot spot of the LED (only for milky white finish). It is possible to fix it under the ceiling with stainless steel springs. It comes in many lengths: from 30cm up to 2m. It is possible to change brightness with 1-10V or with DMX depending on the external power supply.

TECHNICAL SPECIFICATION

REFERRING STANDARDS	IEC 60598-1 / IEC 60598-2-5 / IEC 62471
NOMINAL CURRENT TO THE LEDS	60 mA - 100 mA

LED COLOR
R-G-B-W

eCOLOR 40 is a product of eCOLOR family.
eCOLOR40 has 40 RGBW (10R-10G-10B-10W) power LEDs capable of delivering a very high performance from a very compact housing made in pure aluminum alloy with silver or black anodized finish for a better thermal dissipation. It is available with different optics and controlled via DMX512 from an external power unit.

eCOLOR40 is fully controllable from a remote position with the RDM protocol.

It is possible to create smooth color shades thanks to the logarithmic dimming scale.

The 5 mm thick glass grants IK10 protection, while the protective vent protects the LEDs from condensation.

LED COLOR
high flux daylight LED

The Tower is a compact LED luminaire with an amazing luminous flux capable of illuminate targets at a very long distance (more than one kilometre), with less than 170 W of electric power and a light output exceeding 14500 lm.

The high precision optic integrated with a Fresnel lens grants the user to get a sharp edge beam capable of reaching

unthinkable distances with amazing precision without any halo around.

It is available in white daylight colour temperature (5700K as a standard) with minimum CRI 75.

The unit is characterized by a sturdy aluminium structure with IP66 and a stainless steel supporting bracket.

TECHNICAL SPECIFICATION

Rainbow I 300W

IP66 IK08  **CE**

LED
High-brilliant LED light of
latest generation technology

GLASS
Tempered glass
5 mm thick

LED COLOR
RGBW

The Rainbow I, is the smallest device of the rainbow family. It is a powerful device developed to illuminate targets at a long distance. The power absorption is 300W and generates more than 16000 lm at full power in RGBW configuration. It is made of die casting aluminum alloy with dark grey powder painted finish. It is fully controllable via RDM/DMX512.

The electronic has a continuous thermal control to protect LEDs and electronic from overheating: this control ensure long lasting life even in harsh environments. It is possible to choose different optics: from very narrow up to very wide. The optical system is protected by a thick tempered glass that has an impact rating of IK08.

TECHNICAL SPECIFICATION

RGBW

The rainbow II, is a powerful and efficient device especially developed to illuminate big facades, bridges or far away targets. It is fully IP rated for permanent outdoor use. The rainbow II is completely controllable via RDM; the user can change address or change personality: from 4 channels mode to 8 channels mode to drive independently the 2 modules.

Moreover it is also possible to read LED temperature inside the 2 modules and inside the power box. Thanks to the master/slave function, one device can control multiple devices connected to the net without the use of an external desk (for small installations).

LED
High-brilliant LED light of
latest generation technology

LED COLOR
RGBW

The Rainbow III is the most powerful device of the Rainbow family. It is the result of years of experience in developing electronic in many fields. With a light output of 48000 lm the rainbow3 is the perfect solution for those applications where it is necessary to have a powerful and large light output including theaters, stages and big events. A protective vent prevents the formation of condensation inside the modules.

A big selection of optics allows the user to find the perfect solution for his project in order to have a uniform color mixing. With the RDM it is possible to change the personality of the fixture and shift from 4 channels to 12 channels. Thanks to the master/slave function, one device can control multiple devices connected to the net without the use of an external desk (for small installations).

eWHITE-LINE is a LED bar for outdoor applications capable of shifting from warm white to cold white through DMX control. The housing is made of anodized aluminum alloy. It's an ideal solution for wall washing on elegant surfaces. It is available with 3 different optics that grant a perfect light

uniformity on the surface. The stainless steel bracket allows a very easy and fast installation, reducing technical time. The high IP rating together with the protective vent assures a high performance over the years.

eLINE COLOR is a LED bar for outdoor applications. The housing is made of anodized aluminum alloy. It's the ideal solution for wall washing on elegant surfaces. eLINE-COLOR is an extreme powerful device available with 32-48-64 RGBW LEDs grouped in clusters of 4 each. The high precision optics grant a superb color mixing even on close up installations.

The white LED allows the designer to get new shades of colors and its changing is smooth thanks to the dimming function in logarithmic scale. eLINE COLOR is perfectly controlled via DMX512. The stainless steel bracket allows a very easy and fast installation, reducing technical time. The high IP rating together with the protective vent assure a high performance over the years.

Supernova is a rigid LED strip that works with +24V DC that is available for indoor or outdoor use. The housing available in silver anodized finish is small and can be placed in hidden places. The high IP rating allows the user to install it also near fountains and swimming pools.

It is possible to control the color changing thanks to DMX512 protocol connecting the device to the "clever light" board. It comes in many lengths: from 30cm up to 2m. Supernova is the ideal solution for decorative and cost effective installations with low power absorption.

300 W

eBLACK-2 is a fixture designed for the outdoor playgrounds (tennis, volleyball, futsal, etc).

It consists in a cluster of eBLACK modules. Each module can be adjusted independently to guarantee highest uniformity and to reduce the shadows on the field.

The modules are grouped into a frame made of stainless steel. To reduce the size of the fixture, the power supply is hidden behind the modules.

The fixture is IP66 and includes the junction box to connect to the main power.

APPROVED

eBLACK is a modular LED floodlighting system for sport. eBLACK is designed to light stadiums, playing fields (rugby, baseball), racetracks, gyms and swimming pools.

Thanks to its technical characteristic, eBLACK received the official certification from FIGC and LND.

eBLACK can vary its surface area of illumination by adjusting

the inclination and the angle of each module. This solution improves the quality of illumination at the ground.

eBLACK is designed and built to last: the rugged material used, as the housing is black anodized aluminum, supporting parts and stainless steel screws, tempered glass and metal grommets, are resistant to UV radiation and bad weather.

APPROVED

eBLACK Professional is a modular LED floodlighting system for sport. In particular the color temperature of the emitted light - 5700K – and the color rendering index - >90 – meet the protocols specified by FIFA and the international broadcasting about the television filming of the most important football events in the world (Champions League, World Cup).

Thanks to its technical characteristic, eBLACK received the official certification from FIGC and LND.

Because of its flexibility, eBLACK professional is suitable to illuminate even other sports events whose images for

their international profile (races of F.1, swimming world championship, tennis tournaments, etc) are intended to be spread all over the world.

eBLACK can vary its surface area of illumination by adjusting the inclination and the angle of each module. This solution improves the quality of illumination at the ground.

eBLACK is designed and built to last: the rugged material used, as the housing is black anodized aluminum, supporting parts and stainless steel screws, tempered glass and metal grommets, are resistant to UV radiation and bad weather.

eBLACK AIR 160 / 325 / 650 / 970 / 1300 W

IP66 IK06  

LED

High-brilliant LED light of latest generation technology

TEMPERED GLASS
High transparency 4mm thick

POWER
160 - 1300 W

The eBLACK AIR family is perfect for airports, railway stations, ports, important road crossings and large areas.

The eBLACK AIR allows uniform light distribution with declaring effect in compliance with the "dark skies" rules.

The housing is fully made of aluminum alloy with black

anodized finish and stainless steel frame that grants a long lasting life even in high polluted environments and near the seaside. It comes with standard color temperature of 4000K and CRI>70.

TECHNICAL FEATURES

- High light output
- CUT OFF light distribution
- Modular design
- Metal parts in black anodized aluminum and stainless steel
- High-brilliant LED light of latest generation technology
- Deglaring optics
- Standard color temperature 4000K (other color temperatures available on request)
- Standard CRI>70 (higher CRI available on request)
- Dimmable with 1-10V or external PWM (DALI control is available on request)
- Fully flicker free
- High IP rating
- Cleanable with water jets
- High transparency tempered glass 4mm thick
- Possibility to customize the bracket

HOUSING

Made of die casting aluminum

COB

Latest generation

POWER
40 W

I WALK is a compact device for street lighting and for cycle paths. The housing made of die casting aluminum alloy with powder painted finish ensures robustness and good resistance against salty environments. The main optic with very high efficiency is made of tempered

glass: this unique feature ensures perfect optical performances during the years even in very dirty places. The I WALK is IP66 and has an inbuilt surge protection up to 10kV. It is available with plug and play mode or with virtual midnight mode for better energy saving.

TECHNICAL SPECIFICATION

REFERRING STANDARD	IEC 60598-2-3 / IEC 62471
NUMBER OF COB	1
NOMINAL CURRENT TO THE LED	1050 mA
POWER AT SOURCE	40W
NOMINAL INPUT VOLTAGE	220 - 240 V AC
NOMINAL INPUT FREQUENCY	50-60 Hz
INPUT SURGE PROTECTION	DM6kV - CM:10kV
ELECTRICAL CALSS	II - I upon request
LIGHT INTENSITY REGULATION	1-10 V
PROGRAMMABLE VERSION	Midnight dimming
BEAM ANGLES	Asymmetrical beam
STANDARD POLE HEIGHT	4m
INITIAL LUMEN OUTPUT	5700 lm
COLOR TEMPERATURE	4000K (3000K / 5000K upon request)
CRI	>70
LM OUTPUT LIFETIME	> 50000h
OPERATING TEMPERATURE	-30°C / +50° C
IP RATING	IP66
IMPACT PROTECTION	IK08
WEIGHT	3kg
FRONT LENS	Tempered glass cleanable with high pressure water jets

TECHNICAL FEATURES

- High light output
- Integrated power supply (plug and play or programmable with midnight dimming)
- "Metal parts in die casting aluminium with powder painting and stainless steel screws to last"
- "High-brilliant LED light of latest generation technology"
- special glass optic with deglaring effect
- Aerodynamic design with better heat dissipation, low wind resistance and good self cleaning performance
- Fast replacement of the photometric components and power supply in order to update the fitting with the latest technologies

I-Way 55 W

IP66 IK07   CE

3 STREET

The I-Way is a compact but powerful device for urban lighting ideal for the city center streets. It is the ideal solution for car parks, pedestrian zones and cycle paths that allows the user to get a very short payback time. It ensures that the lighting meets the real needs of the place to be lit.

The I-Way is made of aluminum alloy and stainless steel. The special optics in tempered glass ensure an high IK rating and a very high efficiency together with a de-glaring effect. It is easy and fast to install the I-Way thanks to the light weight and the compact shape.

TECHNICAL SPECIFICATION

REFERRING STANDARDS	IEC 60598-2-3 / IEC 62031 / IEC 62471
NUMBER OF COB	1
NOMINAL CURRENT TO THE LEDS	950 mA
POWER AT SOURCE	55 W
NOMINAL INPUT VOLTAGE	220 - 240 V AC
NOMINAL INPUT FREQUENCY	50-60 Hz
INPUT SOURCE PROTECTION	DM6KV - CM:10 Kv
ELECTRICAL CLASS	II - I upon request
LIGHT INTENSITY REGULATION	1-10 V
PROGRAMMABLE VERSION	Midnight dimming
BEAM ANGLES	2 asymmetrical beam available
STANDARD POLE HEIGHT	7-8 m
INITIAL LUMEN OUTPUT	8800 lm
COLOR TEMPERATURE	4000K (3000K / 5000K upon request)
CRI	> 70
LM OUTPUT LIFETIME	> 50000 h
OPERATING TEMPERATURE	-30°C / +50°C
IP RATING	IP66
IMPACT PROTECTION	IK07
WEIGHT	6,2 Kg
FRONT LENS	Tempered glass cleanable with high pressure water jets

3 STREET

HOUSING
Made of die casting aluminum

2 COB
Latest generation

POWER
110 W

The I-Street is very robust and reliable device for urban lighting made of aluminum alloy and stainless screws. It comes with different optics made of glass in order to have the optimal lighting distribution depending on the distance between the poles and the installation height. The lack of the frontal glass ensures a better optical performance and a higher IK rating.

Its shape ensures a low wind resistance and a very high heat transmission for a better LED dissipation. Together with a programmable powers supply, it is the best solution for those users who need to update the urban lighting at a reasonable price.

TECHNICAL SPECIFICATION

eBLACK AIR 160 / 325 / 650 / 970 / 1300 W IP66 IK06 CE

LED

High-brilliant LED light of latest generation technology

TEMPERED GLASS
High transparency 4mm thick

POWER
160 - 1300 W

The eBLACK AIR family is perfect for airports, railway stations, ports, important road crossings and large areas.

The eBLACK AIR allows uniform light distribution with declaring effect in compliance with the "dark skies" rules.

The housing is fully made of aluminum alloy with black

anodized finish and stainless steel frame that grants a long lasting life even in high polluted environments and near the seaside. It comes with standard color temperature of 4000K and CRI>70.

TECHNICAL FEATURES

- High light output
- CUT OFF light distribution
- Modular design
- Metal parts in black anodized aluminum and stainless steel
- High-brilliant LED light of latest generation technology
- Deglaring optics
- Standard color temperature 4000K (other color temperatures available on request)
- Standard CRI>70 (higher CRI available on request)
- Dimmable with 1-10V or external PWM (DALI control is available on request)
- Fully flicker free
- High IP rating
- Cleanable with water jets
- High transparency tempered glass 4mm thick
- Possibility to customize the bracket

eBLACK-KOMPACT is an extreme powerful fixture designed for lighting indoor playgrounds and big warehouses.

eBLACK-KOMPACT, available with several optics, allows to achieve a very high uniformity on the floor. The black anodized aluminum housing ensures a high dissipation even in very hot places like the attics.

The high precision optic ensures a low glaring experience during the match.

The super bright tempered glass gives strengths to the impacts up to IK06. It can be used with brackets or hung with a stainless steel wire.

NOVA indoor is a thin LED bar for indoor lighting. Its small size allows to hide NOVA in many places to realize direct and indirect illumination. NOVA is the perfect solution for cove lighting and under cabinet lighting. The high light output allows to use NOVA for functional and for decorative lighting. It works at 24V DC and is available in many color temperatures, from 2200K up to 4000K, with minimum CRI 80.

NOVA allows to choose from many colors besides white: red, orange, green blue, lime and royal blue.

It comes in many lengths: from 30cm up to 2m and it is possible to fix it with clips on the ceiling or hung it with steel threads.

It is possible to change brightness with 1-10V or with DMX depending on the external power supply.

118 W / 140 W

IP66 IK08  

LED

High-brilliant LED light of latest generation technology

HOUSING

Made of die cast aluminum

POWER

118 W / 140 W

The I-BAY 118-140 is the ideal solution for harsh environments like warehouses, factory plants, logistic areas and indoor sports facilities. Its main feature is the amazing robustness: the fixture doesn't need maintenance and the high reliability ensures long lasting life even at high temperatures.

The high efficiency LED combined with the high precision optics grant a powerful luminous flux that allow the user to replace the old lamps with traditional technology and get a

fast and sure payback time in old installations and allow the designer to optimize the lighting design in new projects.

The high IK08 rating allows the use also in indoor sport facilities like tennis courts.

There are several beams available including the high-rack optics that are engineered to illuminate vertical planes with exceptionally high accuracy in order to optimize the lighting design in warehouses.

TECHNICAL SPECIFICATION

REFERRING STANDARD	IEC 60598-1
LED	40
NOMINAL INPUT VOLTAGE	220 - 240 V AC
NOMINAL INPUT FREQUENCY	50 - 60 HZ
NOMINAL CURRENT TO THE LEDS	500 mA - 600 mA
POWER AT SOURCE	118W / 140W
INSULATION CLASS	I
CONNECTION	Free end cable
BEAM ANGLE	50° / 100° / 20°x115°
LUMINOUS FLUX	17200 lm / 19300 lm
COLOR TEMPERATURE (*)	4000 K
CRI (**)	min 70
LM OUTPUT LIFETIME	>50000H

The BRAVO-ECO is a specific device developed for illuminate corridors and indoor surfaces with very high uniformity. The three phase plugs installed on the upper part of the device can work with standard power tracks of many brands letting the designer free to choose the most suitable solution for the project. It comes in 2 sizes: 30W and 60W generating an

high luminous flux. Thanks to the driverless technology, these devices will last for years without the need of maintenance. The BRAVO-ECO is the best solution for museums, shops, and supermarkets thanks also to the wide variety of colour temperatures available.

eBLACK is a modular LED floodlighting system for sport. eBLACK is designed to light stadiums, playing fields (rugby, baseball), racetracks, gyms and swimming pools.

Thanks to its technical characteristic, eBLACK received the official certification from FIGC and LND.

eBLACK can vary its surface area of illumination by adjusting

the inclination and the angle of each module. This solution improves the quality of illumination at the ground.

eBLACK is designed and built to last: the rugged material used, as the housing is black anodized aluminum, supporting parts and stainless steel screws, tempered glass and metal grommets, are resistant to UV radiation and bad weather.

TECHNICAL FEATURES

- High light output
- Versatile and modular for every need
- 1 to 8 modules, independently adjustable. Rotation +/-25°, vertical receiver +0,8° -2°
- Separate power supply
- Metal parts in black anodized aluminium and stainless steel screws to last, completely designed and made in Italy
- High-brilliant LED light of latest generation technology
- Light intensity control (dimmer)
- Customizable optics and fixing brackets
- Flicker free (supports the latest tv broadcasting standards)
- Available with 5700K and CRI 90

eBLACK-KOMPACT is an extreme powerful fixture designed for lighting indoor playgrounds and big warehouses.

eBLACK-KOMPACT, available with several optics, allows to achieve a very high uniformity on the floor. The black anodized aluminum housing ensures a high dissipation even in very hot places like the attics.

The high precision optic ensures a low glaring experience during the match.

The super bright tempered glass gives strengths to the impacts up to IK06. It can be used with brackets or hung with a stainless steel wire.

eBLACK AIR 160 / 325 / 650 / 970 / 1300 W

IP66 IK06  

LED

High-brilliant LED light of latest generation technology

TEMPERED GLASS

High transparency 4mm thick

POWER

160 - 1300 W

The eBLACK AIR family is perfect for airports, railway stations, ports, important road crossings and large areas.

The eBLACK AIR allows uniform light distribution with declaring effect in compliance with the "dark skies" rules.

The housing is fully made of aluminum alloy with black

anodized finish and stainless steel frame that grants a long lasting life even in high polluted environments and near the seaside. It comes with standard color temperature of 4000K and CRI>70.

TECHNICAL FEATURES

- High light output
- CUT OFF light distribution
- Modular design
- Metal parts in black anodized aluminum and stainless steel
- High-brilliant LED light of latest generation technology
- Deglaring optics
- Standard color temperature 4000K (other color temperatures available on request)
- Standard CRI>70 (higher CRI available on request)
- Dimmable with 1-10V or external PWM (DALI control is available on request)
- Fully flicker free
- High IP rating
- Cleanable with water jets
- High transparency tempered glass 4mm thick
- Possibility to customize the bracket

LED COLOR
high flux daylight LED

The Tower is a compact LED luminaire with an amazing luminous flux capable of illuminate targets at a very long distance (more than one kilometre), with less than 170 W of electric power and a light output exceeding 14500 lm.

The high precision optic integrated with a Fresnel lens grants the user to get a sharp edge beam capable of reaching

unthinkable distances with amazing precision without any halo around.

It is available in white daylight colour temperature (5700K as a standard) with minimum CRI 75.

The unit is characterized by a sturdy aluminium structure with IP66 and a stainless steel supporting bracket.

TECHNICAL SPECIFICATION

REFERRING STANDARDS	IEC 60598-1 / IEC 60598-2-5
NOMINAL CURRENT TO THE LEDS	4000 mA
POWER AT SOURCE	150 W

Ramses II

up to 72000 W

IP43  

LENS
*resistant to sudden changes
in temperature.*

PARABOLIC REFLECTOR
*Electroshaped nickel-rhodium,
at ultra-high precision.*

TILT MECHANICAL LOCK

Ramses II is the biggest and most powerful Xenon spotlight in the world with its 72.000W.

The unit is equipped with 6 Xenon bulbs in 12.000W power each which, suitably adjusted, merge into one creating a single light beam visible within 15 Km.

These features, making it unique, identify RAMSES II like the ideal choice for big events and shows.

The use of special ultra-high precision electro-shaped

parabolic reflectors with coating in nickel-rhodium, improves the performances of the lamps and optimises the light emission, conveying the rays into sharp, linear and perfectly collimated beams.

The aiming of the unit is manually adjustable with a Tilt inclination 0° to +75°, while the 360° rotation is motorized.

The joint, connecting the head to the base, is patented by Spacecannon.

TECHNICAL SPECIFICATION

LAMP

Power Average service life
12.000 W300 h

PARABOLIC REFLECTOR

Electro-shaped parabolic reflector with nickel-rhodium coating and very high precision.
Ø 460 mm / 18,11 inches.

FOCUSING

Internal manual focusing system for regulating the width of the beams independently.

POWER SUPPLY UNIT

72 power supplies separated
IN: 208 V AC two-phase voltage.
OUT: 50 V - 20 A

FUNCTIONS

Remote control for safe lighting of the lamps.

MOVEMENT

Manual tilt from 0° to +75°.
Pan rotation: 360°, gearless.
Speed control from 0 to 10 rpm.

INSULATION CLASS

Model 72.000 W

Leukos

4000 / 7000 W

IP55  

SCREWS

in stainless steel, to hold the lens-holder ring to the unit

COOLING SYSTEM

outlet for the hot air from the searchlight (cooling system for inside components).

SPOTLIGHT HOUSING

in reinforced weatherproof aluminium.

MANUAL TILT

PARABOLIC REFLECTOR

Electroshaped nickel-rhodium, at ultra-high precision.

LENS

resistant to sudden changes in temperature.

POWER SUPPLY UNIT

GLAND CONNECTOR

PG16 gland connector in chromium-plated metal, for the power cable.

The spotlights Leukos produce light beams with very high visibility, ideal for wide grazing or at a distance architectural lighting. The unit is fitted with white light xenon lamps and is available in 4.000 or 7.000 W powers; the color temperature of the light generated by the xenon lamps is 6000K°.

The shape and diffusion of the light beam depends also on the zoom value, which can be adjusted via the soft-touch

keyboard: the beam can be widened or narrowed and its angle varied for a spot or flood effect.

The use of a special high precision electro-shaped parabolic reflector with coating in nickel-rhodium improves the performances of the lamp and optimises the light emission, conveying the rays into sharp, linear and perfectly parallel beams, reducing the external lightpollution.

TECHNICAL SPECIFICATION

SPOTLIGHT HOUSING

In weatherproof and resistant aluminium. Grey polyester finish for outdoors.

IP RATING

IP 55

TILT MECHANICAL LOCK

POWER SUPPLY UNIT

ON-BOARD COMPUTER

To control the different functions, assign DMX512 addresses, retrieve preloaded shows, monitor all parameter status, with Error alarm

CONNECTORS

3 or 5 pin DMX IN and OUT

Compact professional spotlight, with mobile mechanized body, 4000 or 7000 W powers, with high performances.

The dichroic color changing system (CMY), worldwide patented by Space Cannon, allows both the beam to be coloured with a wide range of shades and a greater color saturation.

The frost effect allows a change from a sharp beam to a more diffused and softer one. Spotlight equipped with electro-

mechanical shutter, to darken the beam partially or totally.

The use of a special high precision electro-shaped parabolic reflector with coating in nickel-rhodium improves the performances of the lamp

and optimises the light emission, conveying the rays into sharp, linear and perfectly parallel beams, reducing the external pollution.

TECHNICAL SPECIFICATION

SPOTLIGHT HOUSING

Reinforced aluminium frame; shell in ABS.

IP RATING

IP 43

LAMP

Power	Average service life
4.000 W	1.000 h
7.000 W	1.000 h
